# Opsera for Salesforce Release Management

**Fast, secure, and flexible continuous delivery — with no coding required.**

Salesforce deployments that are speedy, secure, and automated. With Opsera's open and enterprise-grade platform, you're free to deliver powerful, high-quality Salesforce releases.

### Releases that fit your tools and your needs

Opsera takes the pain out of merge conflicts and synchronizing your Salesforce orgs. Automate repetitive tasks using plug-n-play integrations with the DevOps tools you prefer.

### Safe, high-quality releases, fully automated

Release quicker while improving security, quality, and compliance. With integrations to IT Service Management and collaboration tools, Opsera gives you repeatable processes and guardrails that will make your IT security team happy.

### Totally visible, every step of the way

Unify your logs and see data from all your tools in one place. Opsera eliminates manual work, with complete visibility across your development lifecycle and automatically-generated KPIs. Speed up troubleshooting and ease compliance reporting.

## What does this mean for your team?

**50%**
fewer manual release tasks

**25%**
increased developer productivity

**80%**
faster Salesforce releases

That's right: 80% faster. With Opsera, there's no more vendor lock-in or limited tool choices. Our open, no-code platform breaks down silos and simplifies pipelines across your entire org. You get unmatched Salesforce release management and scale for all your business apps.

- **Simplify branches, merging, and org synchronization**
Use single-click tasks to manage and merge branches of code from all your developers. Then detect and deploy changes from other orgs to keep everyone in sync.

- **True continuous integration with automated release pipelines** - You'll really see the deployment flows for your whole team. Automate quality unit testing and streamline security and compliance checks. For once, you can be sure that every release has been verified and logged.

- **Fast, flexible rollbacks with a single click** - Break something? No sweat. Just click to rollback to the org metadata from before your most recent release.

- **Use your tools and integrate with ease** - Opsera offers over 100 integrations with popular tools like

 (And we're adding more all the time.) Enjoy unlimited flexibility with any development, IT, or enterprise tool.

- **Consolidated logging and reports for full visibility**
User-specific dashboards give you clear deployment reports, comprehensive logs, and metrics from a single pane of glass. That helps everyone monitor things together, from troubleshooting to release velocity tracking.

## One platform, all the apps

A single platform to manage releases across all your cloud and software applications.

Opsera works smoothly across multi-cloud

## Norton LifeLock cuts Salesforce deployment time in half

Norton LifeLock deployed their first Salesforce CI/CD pipeline in just hours with Opsera's point-and-click pipeline builder. Security, quality, and approval gates were added automatically, ending costly reworks and outages. Result: **better deployments in 50% less time.**

## Infoblox scales DevOps with one solution for all their SaaS applications

Infoblox supports them all with Opsera's single platform. Instead of adding 5 engineers and taking two years to build an internal solution, Infoblox's 4-person team got results in three months, with **40% better security and quality checks.**
